Servicing Professional Underwater Photographic Equipment.

The service of professional underwater photographic systems has been difficult if not impossible to find.

It requires an experienced Company with extremely specialist knowledge and equipment.

Serious photographers often find the manufacturers unwilling or unable to support their products.

Aquaphot are uniquely placed to provide the underwater photographer with everything from sound advice to new equipment.

Aquaphot have been established as the trade experts. With over 50 years of experience in the photographic-electronics business, we are the only company in the UK to act as official service agents for such a wide range of photographic equipment suppliers.

We provide our commercial customers with technical expertise and product advice, both over the phone and in person. We are able to offer all of our clients this valuable service.

Estimates, repairs and servicing are undertaken promptly to the highest of standards.

We can often service equipment on the day we receive it and have even carried out repairs while the customer waits.

Over the last twenty years our business has grown by recommendation alone, we believe that quality of service to our customers is paramount to our existence, so you can be assured we offer the best solution to your underwater photographic needs.

More Than Just a Service

Here at Aquaphot we are dedicated to underwater photographic service and as a result consider every piece of equipment a priority, every customer the most important and every contact an advertisement for our company. We are geared to deal with this type of equipment and can offer,

- *all risks insurance from receipt to delivery*
- *booked in and estimated equipment within 48 hours*
- *full service tracking*
- *a large inventory of underwater spares*
- *repair turnaround in one week*
- *telephone and e-mail support*
- *signed for delivery*
- *6 month repair warranty*
- *specialist technical support and even repair while you wait if necessary.*

You can be assured the service you receive from us is second to none.

Let us show you why so many of our commercial customers use us year after year.

How often should I get my equipment serviced?

This is the most common question we are asked - even from customers of brand new equipment.

There are several reasons to have equipment serviced even if you do not get it wet. Silicone and various other greases do not have a particularly long life, five years is the normal expectancy from most manufacturers. Seals will start flatten off after about 18 months, this does depend on storage of course but 2 years would in most cases be in excess of our recommendations.

In most equipment you will find rubber dampers or foam light trapping. Depending on the type of material used and exposure to UV – this can start to break down after 3 or 4 years.

All plastics and rubbers are breaking down from the day after production, but often an innocent insect repellent will speed things up considerably. Any solvent base (no matter how diluted) will reduce the normal life expectancy of a product.

With all this to contend with we recommend service intervals should be no longer than 18 months to 2 years – even without use!
